AI Usage Declaration — Week 05

1. Declaration

We used AI tools for this project during the reporting period.

25125049 - Trần Hồng Vy (TV1)

I used **ChatGPT (OpenAI)** to discuss the project requirements, plan the five-week development schedule, divide responsibilities among four members, draft and review planning documents, revise the weekly Git workflow.

ChatGPT assisted with the wording and organization of documents such as `WEEKLY_PLAN.md`, `CODING_RULES.md`, and `docs/plans/plan_for_week_1.md`. I reviewed, adjusted, and committed the relevant materials myself. The Git commands were executed on my own computer; ChatGPT only provided explanations and guidance.

---

2. AI Tool Information

25125049 - Trần Hồng Vy (TV1)

Item	Details
AI Tool	ChatGPT
Provider	OpenAI
Platform	ChatGPT
Model	GPT-6
Usage Period	26/10/2026 - 06/11/2026
Purposes	Project planning, role assignment, documentation review.
Evidence	ChatGPT conversation history, planning documents, and the repository commit history

---

3. Prompt Log

25125049 - Trần Hồng Vy (TV1)

- **AI Tool**: ChatGPT (OpenAI)
- **Purpose 1:** Review the Personal Finance Manager project scope and organize the functional requirements.
    - **Prompt 1:** "Here is our proposed Personal Finance Manager menu with income management, expense management, reports and statistics, wallets, and recurring transactions. Help me organize and review these functions."
    - **Prompt 2:** "Which features are required by the CS160 project specification, and which are optional extensions, such as setting budgets, transferring between wallets, or searching transactions?"
- **Purpose 2:** Plan the technical architecture, data structures, and binary persistence system for the application.
    - **Prompt 3:** "Help us plan a C++17 console-based Personal Finance Manager using CMake and a custom DynamicArray instead of STL containers."
    - **Prompt 4:** "How should we divide the application into core utilities, master data, transactions, recurring

transactions, statistics, and user-interface modules?"

    - **Prompt 5:** "Review the proposed folder and file structure and identify the common interfaces and dependencies between the modules."

- **Purpose 3:** Divide responsibilities among four team members and establish a five-week development roadmap.
    - **Prompt 6:** "Help assign the four main modules of the Personal Finance Manager project to our four team members."
    - **Prompt 7:** "Prepare a five-week development plan covering setup and architecture, core management, persistence and recurring transactions, statistics and dashboard, and final testing."
- **Purpose 4:** Prepare project documentation and define Git workflow and coding conventions.
    - **Prompt 8:** "Help organize the README, role assignments, weekly plan, file structure, and coding-rules documents for our repository."
    - **Prompt 9**: "Help me prepare a plan for Week 1 of our Personal Finance Manager project."
    - **Prompt 10**: "Check the updated `CODING_RULES.md` and `WEEKLY_PLAN.md` files for consistency with the new reporting schedule."
